

SEVERTSON®

screens

In 1986, Ron Severtson was tasked with creating a coating and application process for U.S. Air Force flight simulators. After many months of research and development, he formulated the ideal coating, which launched his career in a new direction: coating flight simulators for governments and military installations across the globe. As a result, Severtson Corp. was born, also known as Severtson Screens.

In the early 1990s, IMAX Corp. learned of Ron's coating expertise and contracted with him for their new giant 3D movie screens. Thus Severtson entered the cinema screen industry. Severtson has since become known as an industry leader in screen technology and innovation, producing screens for some of the biggest names in the industry. Companies such as AMC, Regal, Cinemark, Dolby, Disney, Six Flags, Legoland, Sony, Warner Bros, and many others use Severtson screens in theaters in over 40 countries.

In 2003, Severtson again expanded operations, this time creating fixed and motorized Home Theater / Pro A/V screen solutions, utilizing the same high-quality materials and coatings developed for the cinema industry. Severtson has become the only company providing screens ranging from home theater and pro a/v to large cinema screens...and everything in between.

From its unlikely origins in the family kitchen to today's three modern U.S.-based production facilities, Severtson Corp. has remained committed to the principles of innovation and uncompromising quality that have made them who they are today.
